# Animal Embryo Centre

## Diergaarderhof

The Netherlands

**Animal Embryo Centre** is a modern company in a natural environment; in the middle of a valuable manmade landscape.

The company's premises designed in a fitting style and with care of the environment have an authentic aura. The horses are being accommodated here in spacious stables on straw with plenty of opportunity to graze.

**Animal Embryo Centre** is a general and technical company that is specialised on a high-quality way of applying modern reproductive technology such as among other things embryo transfer (ET) in horses. For Europe this centre has a unique package of services. **Animal Embryo Centre** has for one the possibility to freeze horse embryos.

### What are the advantages of horse embryo transfer (ET)?

It offers horse owners the possibility to:

- Breed annually more foals from one and the same mare.
- Breed embryos / foals from the same mare and different stallions in one year.
- Use two-year-old mares for breeding.
- Get embryos / foals from mares that are still fully active in top-class sport.

Our centre can take care of the complete ET procedure for you, i.e.:

- Accommodation of donor and recipient mares.
- Insemination, ET, freezing and transferring of the embryos.

If desired we offer the possibility to market the embryos all over the world and there are transfer facilities in the U.S.A. and Canada.

### What are the specific advantages of freezing embryos?

- Frozen embryos can easily be kept and transferred at the moment that the recipient mare is at her best.
- The embryos can be carried to term by your own mares.
- Frozen embryos make a large recipient pool of mares unnecessary.
- They are marketable (export) which simplifies the trade in (top)-breeding material.

We work in partnership with Equine Embryos Inc. in Ontario / Canada.

The company has access to the most qualified equine veterinarians and embryo transfer technicians that bring the highest level of knowledge and technology to its clients. The ET-team of **Animal Embryo Centre** has obtained a EU certification which guaranties the highest quality of work and opens the possibility to export embryos around the world.

### Package of services

#### Animal Embryo Centre

- Embryo transfer (ET)
- Transplantation
- Freezing embryos
- Transport of embryos
- Accommodation of donors and recipients
- Provide recipient mares
- Export of embryos
- Transfers in the U.S.A. and Canada
- Embryo marketing

### Extra service

Due to a recent expansion of our company we were able to create a new possibility. We now have a larger number of recipient mares at our disposal. Therefore it is now possible not only to transfer the embryos we produce ourselves but also transfer the embryos of a third party. You can profit from our experience and professionalism so that we can help you make the transfer to be a successful enterprise. Some advantages of having the transplant take place at our centre:

- We can determine the right moment of flushin
- We can advise you as to the right way of storage, transportation together with the right temperature
- You can use the 'equitainer' (to transport the embryos) and you can use special materials such as parafilm
- We will see to it that you have the correct forms for registry and regulations at your disposal.

### Informatie

Our team would like to give you further information and welcome you on their premises. Contactman in the Netherlands: **A.T.J. Vullers**  
Contactman in the USA and Canada: **Pedro Jou**
